Back-End Node.js, Express, Python, Django, GraphQL

Databases Firebase, SQL, PostgreSQL, NoSQL with MongoDB

Work Experience

Experiment Zone

Nov. 2019 - Present

FRONT-END DEVELOPER

Experiment Zone is a conversion rate optimization company that helps companies identify opportunities and evaluate ideas using data so that they can improve customer experiences and increase sales. Roles and recent projects include:

- Managed the A/B testing development team
- Built and implemented over 200 A/B tests to help companies expand and improve their digital experiences and consistently improved their conversion rates by a minimum of 10% (JavaScript, JQuery, CSS, Webpack, Google Optimize, Google Analytics, Google Tag Manager, Monetate)
- Worked as a front-end developer on the Hypothesis Library, an A/B testing tool web application (React, Redux, Materialize, Firebase)
- Implemented full web page redesigns for several clients, gained experience working with a variety of different web stacks and frameworks (Bootstrap, Material-UI, Materialize CSS, UIKit)
- Built and maintained the experimentzone.com website (Jekyll, Bootstrap, Sass, JavaScript)

CTX Market

Apr. 2021 - Sep. 2021

FRONT-END REACT DEVELOPER

- Worked as a front-end developer on the ctxmarket.com web application (React, React Query, Material-UI, Firebase)
- Designed and built new components and pages along with identifying and fixing bugs
- Built new user experiences including the onboarding flow for new sellers

General Assembly

Apr. 2019 - Jul. 2019

SOFTWARE ENGINEER FELLOW

A full-time, immersive Software Engineering course where I completed in-class projects and personal projects focused on real-world applications of web development principles and best practices. Course projects include:

- Memory Game: DOM manipulation matching game (JavaScript, CSS)
- Habit Tracker: React app with full RESTful API integration
- Blog Express: Blog made with Node, express, and a mongo database

Projects

WANDER

Wander is a personal project built with React, Redux, and Firebase that allows the user to create a post associated with a location on a map and share it with the other logged-in members who visit the area the post is associated with.

CRYPTOCURRENCY LOAN CALCULATOR

The Cryptocurrency Loan Calculator is a React project. The calculator is connected to a public API that continually updates the price of the most popular cryptocurrencies. The calculator allows the user to calculate the amount of cryptocurrency needed as collateral for a cash loan.
